The Secure Authentication Service

Managed Security Services

nccgroup

Signify helps organisations to secure their computer networks. We provide a secure alternative to passwords that safely enables remote access to systems and information by delivering two-factor authentication as an on-demand hosted service. The Signify service has built an outstanding reputation for delivering secure, reliable and flexible two-factor authentication which is quick and easy to deploy. We have an extensive client base across many sectors including major multi-national corporations, small and medium sized businesses, professional services, central government and local authorities.

The Signify Authentication Service

The Signify fully hosted authentication service delivers a choice of token and tokenless authentication services, with flexible options to meet different needs, budgets and working patterns. This makes it easy for our customers to provide the appropriate form of authentication to suit each group of their users.

Our service enables organisations to rigorously identify staff, clients, business partners and other individuals who need secure access to sensitive information, applications and networks. With our dedicated team focused purely on running this high quality hosted service we radically lower the total cost of ownership and simplify the deployment of two-factor authentication.

A Complete Managed Service

Signify's fully hosted authentication service delivers a choice of token and tokenless authentication services, with flexible options to meet different needs, budgets and working patterns. This makes it easy for our customers to provide the appropriate form of authentication to suit each group of their users.

Our service enables organisations to rigorously identify staff, clients, business partners and other individuals who need secure access to sensitive information, applications and networks. With our dedicated team focused purely on running this high quality hosted service we radically lower the total cost of ownership and simplify the deployment of two-factor authentication.

Benefits

- Guaranteed Reliability
- Proven Security
- Flexible to your requirements
- Quick and easy

Who needs two-factor authentication?

Our service is ideal for organisations that have:

- Home workers and day extenders
- Mobile staff
- Business partners who collaborate via an extranet or VPN
- Guest and temporary workers
- 24/7 IT support staff

More than just technology

The successful deployment of two-factor authentication takes more than just technology; you also need to implement a framework of policies, procedures, logistics and user support.

Through our focus on running hosted authentication services, we have learned, defined, and automated many best-practice policies and processes into our service. All you need to do is simply choose the options and policies that suit your organisation's requirements.

Together with 24/7 user support and managed logistics this makes our service very quick and easy to deploy, and is so simple to use that any end user will find it easy.

Our easy to use web portal allows customers to manage and monitor every aspect of their service.

The Signify service is ideal for organisations that want to ensure security and reliability, without taking on the skills, equipment or risk to deploy a solution themselves. By hosting the infrastructure and protecting it from malicious activity, we can provide a service with guaranteed availability globally 24/7.

Where appropriate, multiple organisations can each choose to use the Signify hosted service and then allow users to have a single "federated" identity that can be shared between organisations. This is especially useful for collaborative activities such as complex supply chains, outsourced management or large projects, allowing the independent parties to pay only for what they need.

The Signify service is fully compatible with all leading VPNs, firewalls and web servers including:

Juniper NETWORKS

CiTRIX

CISCO

Salesforce

Check Point SOFTWARE TECHNOLOGIES LTD.

Aventail

Microsoft SharePoint 2010

WatchGuard

SONICWALL

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with businesses to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are best placed to help businesses identify, assess, mitigate & respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
